

Title

Food Ordering App

Description

This mobile application is designed to simplify and modernize the food ordering experience for university students. With a clean, intuitive user interface, the app allows students to browse menus, place customized food orders, and track their delivery in real-time. It incorporates essential features such as secure multi-option payments, personalized recommendations, promotional offers, student discounts, push notifications for order updates, and responsive customer support.

The primary goal is to provide a convenient, time-saving solution tailored for students with busy academic schedules. By reducing the time and effort involved in accessing meals, the app helps students stay focused on their studies while enjoying affordable, quality food. The platform is optimized for use on and around university campuses, with a special focus on users living in dormitories or student housing.

Technology Stack

React Native

Justification for Using React Native

React Native was chosen for its ability to build high-performance, cross-platform mobile applications using a single JavaScript codebase. It significantly accelerates development time with features like hot reloading and a large library of reusable components. The framework delivers a native-like user experience, ensuring smooth animations, fast navigation, and seamless interaction.

Its flexibility allows for easy integration of core functionalities such as geolocation services, secure payment gateways, real-time tracking systems, and API connections for restaurant and order management. Additionally, React Native's strong developer community and broad plugin ecosystem make it a scalable and cost-effective choice for building robust, production-ready mobile applications. This makes it especially suitable for startups or university-centered projects aiming to provide impactful digital services with limited resources.
